How is this tool exactly? Does it loop the disc to check the disc for any errors? If so, what should we pay attention to and how to make it work correctly? I'm not entirely clear, but I'll try my best. There are 3 parts to the process. 1. Open the wav file using WinAmp (I assume Winamp is the default software you are using) 2. Open the WAV editor. The list of WAV editors is pretty large. For example, I can recommend using: for all the different methods. 3. Click on Analyze Disc. This will open the tool you are looking for. I'm assuming you are seeing the message: "Disc appears to be in good condition. Validating compressed data." Does that help? I would recommend keeping your eyes on the above info window when working with this tool. Thank you for the great instruction, Mr. Berry... I did the same with my Disc - audio player with no problems. Then tried to open with the WinAmp and Disc drive opened with some kind of process that... we did not ask for as a first step! The message is: This is an error that occurs when an application tries to use an object that no longer exists. This can happen when: You try to open a file or device that has been disconnected from your computer. You close a file or device without saving any data to it first. The number of bytes written to the end of the file or device exceeds the reserved space. You create a new file or device on the computer and it uses the space on the volume. The device is full and can no longer write to it. You remove a medium from your device and attempt to use the space on the volume. Your application attempts to use an in-use object. Your application attempts to write to an object that is in the middle of being read from. You attempt to open a file or device when it is not open.
